UPPER FEATHER RIVER IRWM  
PROJECT INFORMATION FORM

UPPER FEATHER RIVER IRWM  
PROJECT INFORMATION FORM

Please submit by 5:00 p.m. on August 3, 2015, to [UFR.contact@gmail.com](mailto:UFR.contact@gmail.com)

Please provide information in the tables below:

**I. PROJECT PROPONENT INFORMATION**

<b>Agency / Organization</b>	Collins Pine Company
<b>Name of Primary Contact</b>	Jay Francis
<b>Name of Secondary Contact</b>	Eric O'Kelley
<b>Mailing Address</b>	PO Box 796 Chester CA 96020
<b>E-mail</b>	<a href="mailto:JFrancis@collinsco.com">JFrancis@collinsco.com</a>
<b>Phone</b>	(530) 258-4401
<b>Other Cooperating Agencies / Organizations / Stakeholders</b>	Cal Poly - SLO
<b>Is your agency/organization committed to the project through completion? If not, please explain</b>	Yes

**II. GENERAL PROJECT INFORMATION**

<b>Project Title</b>	UF-2: Rock Creek Meadow Restoration
<b>Project Category</b>	<input type="checkbox"/> <b>Agricultural Land Stewardship</b> <input type="checkbox"/> <b>Floodplains/Meadows/Waterbodies</b> <input type="checkbox"/> <b>Municipal Services</b> <input type="checkbox"/> <b>Tribal Advisory Committee</b> <input checked="" type="checkbox"/> <b>Uplands/Forest</b>
<b>Project Description</b> (Briefly describe the project, in 300 words or less)	To date there are few studies which quantify the hydrologic response of meadow restoration due to vegetation or conifer removal. Quantifying the response of meadow restoration assists forest, range, and agricultural land managers determine the effect of their investment in meadow restoration. This study will use a before/after control intervention (BACI) study design to study the hydrologic change conifer removal from a historic meadow (Rock Creek Meadow). We hypothesize that the conifer removal will create soil hydric characteristics which will promote a wet meadow system. We will instrument two sites 1) a restored meadow and 2) our historic meadow with soil moisture sensors, shallow groundwater wells, and a surface water level recorder. We will be measuring soil moisture, groundwater levels, and soil hydric characteristics for two years prior to meadow restoration and two years following meadow restoration.

<b>Project Location Description</b> (e.g., along the south bank of stream/river between river miles or miles from Towns/intersection and/or address):	Rock Creek Meadow is located within the Upper Feather River Watershed (UFRW). It is approximately 7 miles east on Highway 36 from Chester, CA.
<b>Latitude:</b>	40 19.840
<b>Longitude:</b>	-121 5.252

**III. APPLICABLE IRWM PLAN OBJECTIVES ADDRESSED**

For each of the objectives addressed by the project, provide a one to two sentence description of how the project contributes to attaining the objective and how the project outcomes will be quantified. If the project does not address *any* of the IRWM plan objectives, provide a one to two sentence description of how the project relates to a challenge or opportunity of the Region.

<b>Upper Feather River IRWM Objectives:</b>	<b>Will the project address the objective?</b>	<b>Brief explanation of project linkage to selected Objective</b>	<b>Quantification</b> (e.g. acres of streams/wetlands restored or enhanced)
Restore natural hydrologic functions.	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> N/A	The removal of conifers encroached on historic meadows is hypothesized to restore hydrologic conditions conducive to maintaining meadow habitat.	75 acres
Reduce potential for catastrophic wildland fires in the Region.	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> N/A	The interruption of continuous conifers will help to create a fuel break.	
Build communication and collaboration among water resources stakeholders in the Region.	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> N/A	The results of the research on meadow restoration will be shared by presentations with local watershed groups, The Upper Feather River IRWM, and the monitoring study group of the Ca. Dept. of Forestry. We anticipate 3-4 scientific journal articles will be published from the study.	
Work with DWR to develop strategies and actions for the management, operation, and control of SWP facilities in the Upper Feather River Watershed in order to increase water supply, recreational, and	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> N/A		

<b>Upper Feather River IRWM Objectives:</b>	<b>Will the project address the objective?</b>	<b>Brief explanation of project linkage to selected Objective</b>	<b>Quantification</b> (e.g. acres of streams/wetlands restored or enhanced)
environmental benefits to the Region.			
Encourage municipal service providers to participate in regional water management actions that improve water supply and water quality.	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> N/A		
Continue to actively engage in FERC relicensing of hydroelectric facilities in the Region.	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> N/A		
Address economic challenges of municipal service providers to serve customers.	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> N/A		
Protect, restore, and enhance the quality of surface and groundwater resources for all beneficial uses, consistent with the RWQC Basin Plan.	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> N/A	This project will quantify the effect restoring a historic meadow and thinning the upland forest around the meadow has on the ground and surface water in the restored meadow.	
Address water resources and wastewater needs of DACs and Native Americans.	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> N/A		
Coordinate management of recharge areas and protect groundwater resources.	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> N/A	Meadows are identified as important storage areas of Sierra Nevada precipitation and water. This study is attempting to quantify this change in hydrology due to restoring the meadow and thinning the upslope forest.	
Improve coordination of land use and water resources planning.	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> N/A	Prior to the conifer removal, it is somewhat difficult to delineate the boundaries of the actual historical meadow.	
Maximize agricultural, environmental and municipal water use efficiency.	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> N/A		
Effectively address climate change adaptation and/or mitigation in water resources	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> N/A	We hypothesize that restoration of meadows encroached by conifers and	

Upper Feather River IRWM Objectives:	Will the project address the objective?	Brief explanation of project linkage to selected Objective	Quantification (e.g. acres of streams/wetlands restored or enhanced)
management.		thinning of the forest surrounding the meadows will create greater resiliency in maintenance of meadow habitat in a changing climate. Actively managing forests for increased water yield to maintain meadow habitat in the Sierra Nevada might be required with changing precipitation predicted due to climate change.	
Improve efficiency and reliability of water supply and other water-related infrastructure.	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> N/A	The water drafting site on Rock Creek at Hwy 36 is an important source of water for dust abatement for projects in the area. Increased water flows will allow this site to be used later into the season.	
Enhance public awareness and understanding of water management issues and needs.	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> N/A	Results from the study will be shared in public forums through presentations and published scientific articles.	
Address economic challenges of agricultural producers.	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> N/A		
Work with counties/communities/groups to make sure staff capacity exists for actual administration and implementation of grant funding.	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> N/A		

If no objectives are addressed, describe how the project relates to a challenge or opportunity for the Region:

**IV. PROJECT IMPACTS AND BENEFITS**

Please provide a summary of the expected project benefits and impacts in the table below or check N/A if not applicable; **do not leave a blank cell**. Note that DWR encourages multi-benefit projects.

<b>If applicable, describe benefits or impacts of the project with respect to:</b>		
<b>a. Native American Tribal Communities</b>	<input checked="" type="checkbox"/> N/A	
<b>b. Disadvantaged Communities<sup>1</sup></b>	<input type="checkbox"/> N/A	The people who conduct the work on these types of projects typically live in the communities of Chester, Westwood or Greenville. All three of these towns have been designated as Disadvantaged Communities.
<b>c. Environmental Justice<sup>2</sup></b>	<input checked="" type="checkbox"/> N/A	
<b>d. Drought Preparedness</b>	<input checked="" type="checkbox"/> N/A	
<b>e. Assist the region in adapting to effects of climate change<sup>3</sup></b>	<input type="checkbox"/> N/A	Restoring hydrologic functions of meadows will create greater resiliency in maintenance of meadow habitat in a changing climate. We hypothesize that the result will demonstrate improved hydrologic conditions conducive to maintaining meadow habitat. This type of active management will likely be required in a changing climate.
<b>f. Generation or reduction of greenhouse gas emissions (e.g. green technology)</b>	<input type="checkbox"/> N/A	These multiproduct harvests have been calculated to have net reduction in greenhouse gasses by sequestering carbon in long-term form of solid wood products and using the sub-merchantable material to generate electricity thereby reducing the need for fossil fuels.
<b>g. Other expected impacts or benefits that are not already mentioned elsewhere</b>	<input type="checkbox"/> N/A	Scientific evidence of benefits of removing encroached conifers and thinning upland forests toward maintaining meadow ecosystems and hydrologic functions.
<p><sup>1</sup> A Disadvantaged Community is defined as a community with an annual median household (MHI) income that is less than 80 percent of the Statewide annual MHI. DWR’s DAC mapping is available on the UFR website (<a href="http://featherriver.org/maps/">http://featherriver.org/maps/</a>).</p> <p><sup>2</sup> Environmental Justice is defined as the fair treatment of people of all races, cultures, and incomes with respect to the development, adoption, implementation and enforcement of environmental laws, regulations and policies. An example of environmental justice benefit would be to improve conditions</p>		

(e.g. water supply, flooding, sanitation) in an area of racial minorities.  
<sup>3</sup> Climate change effects are likely to include increased flooding, extended drought, and associated secondary effects such as increased wildfire risk, erosion, and sedimentation.

DWR encourages multiple benefit projects which address one or more of the following elements (PRC §75026(a)). Indicate which elements are addressed by your project.

a. Water supply reliability, water conservation, water use efficiency	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> N/A	g. Drinking water treatment and distribution	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> N/A
b. Stormwater capture, storage, clean-up, treatment, management	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> N/A	h. Watershed protection and management	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> N/A
c. Removal of invasive non-native species, creation/enhancement of wetlands, acquisition/protection/restoration of open space and watershed lands	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> N/A	i. Contaminant and salt removal through reclamation/desalting, other treatment technologies and conveyance of recycled water for distribution to users	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> N/A
d. Non-point source pollution reduction, management and monitoring	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> N/A	j. Planning and implementation of multipurpose flood management programs	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> N/A
e. Groundwater recharge and management projects	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> N/A	k. Ecosystem and fisheries restoration and protection	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> N/A
f. Water banking, exchange, reclamation, and improvement of water quality	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> N/A		

**V. RESOURCE MANAGEMENT STRATEGIES**

For each resource management strategy (RMS) employed by the project, provide a one to two sentence description in the table below of how the project incorporates the strategy. A description of the RMS can be found in Volume 2 of the 2013 California Water Plan (<http://featherriver.org/2013-california-water-plan-update/>).

Resource Management Strategy	Will the Project incorporate RMS?	Description of how RMS to be employed, if applicable
<b>Reduce Water Demand</b>		
Agricultural Water Use Efficiency	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
Urban water use efficiency	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
<b>Improve Flood Management</b>		
Flood management	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
<b>Improve Operational Efficiency and Transfers</b>		
Conveyance – regional/local	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
System reoperation	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
Water transfers	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
<b>Increase Water Supply</b>		
Conjunctive management	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
Precipitation Enhancement	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
Municipal recycled water	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	

Resource Management Strategy	Will the Project incorporate RMS?	Description of how RMS to be employed, if applicable
Surface storage – regional/local	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	Restoring meadow hydrology slows the timing of water delivery dissipating surface water peakflows (downstream flooding). It further increases the volume of sub-surface/groundwater decreasing sediment and naturally filtering water for improved water quality.
<b>Improve Water Quality</b>		
Drinking water treatment and distribution	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
Groundwater remediation/aquifer remediation	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	Restoring meadow conditions and hydrology allows more precipitation to enter the ground water supply and less evapotranspiration of this water.
Matching water quality to water use	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
Pollution prevention	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
Salt and salinity management	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
Urban storm water runoff management	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
<b>Practice Resource Stewardship</b>		
Agricultural land stewardship	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
Ecosystem restoration	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	Meadow habitat has decreased in the Sierra Nevada over the last century. Climate change, fire suppression, and minimal forest management of Federal forest lands make managing meadow ecosystems in the Sierra Nevada imperative to ensure this ecosystem does not disappear.
Forest management	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	Managing forests for improvements in water yield has been a focus of research for many decades. With predicted changes in hydrology due to climate change managing forests to improve hydrologic processes will become extremely important. Managing forests to improve meadow hydrology is one aspect of managing forests for future ecosystem values.
Land use planning and management	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
Recharge area protection	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	Improving forest conditions through management to improve hydrologic processes will help protect recharge areas and processes.

Resource Management Strategy	Will the Project incorporate RMS?	Description of how RMS to be employed, if applicable
Sediment management	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	Improved meadow ecosystems and water yield will help manage sediments
Watershed management	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	Meadows and wetlands are important features within watersheds. They store water altering timing of runoff, create areas of low flow surface water, and seasonal ponding useful for wildlife habitat. Understanding how the interactions of land/forest management can improve meadow habitat will be useful information to assist in decisions of how to best reconcile human interactions with their watersheds.
<b>People and Water</b>		
Economic incentives	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
Outreach and engagement	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	We plan to continue to host public and agency tours to educate the public and resource professionals of the benefits of meadow restoration projects.
Water and culture	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	The dissemination of the research on forest management improvements to meadow habitat hopefully will help to demonstrate to people the importance of managing Sierra Nevada forest toward not only economic but also environmental goals.
Water-dependent recreation	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	This project area drains to Lake Almanor, an important water-dependent recreation site in the Feather River watershed. Increased water yields will help promote & sustain recreation.
Wastewater/NPDES	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	

Other RMS addressed and explanation:

**VI. PROJECT COST AND FINANCING**

Please provide any estimates of project cost, sources of funding, and operation and maintenance costs, as well as the source of the project cost in the table below.

PROJECT BUDGET					
Project serves a need of a DAC?: <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No					
Funding Match Waiver request?: <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No					
	Category	Requested Grant Amount	Cost Share: Non-State Fund Source* (Funding Match)	Cost Share: Other State Fund Source*	Total Cost
a.	Direct Project Administration	\$10,000	\$10,000		\$20,000
b.	Land Purchase/Easement				
c.	Planning/Design/Engineering / Environmental	\$15,000	\$15,000		\$30,000
d.	Construction/Implementation				
e.	Environmental Compliance/ Mitigation/Enhancement				
f.	Construction Administration	\$15,000	\$15,000		\$30,000
g.	Other Costs				
h.	Construction/Implementation Contingency	\$140,000			\$140,000
i.	Grand Total (Sum rows (a) through (h) for each column)	\$180,000	\$40,000		\$220,000
j.	Can the Project be phased? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No If yes, provide cost breakdown by phases				
		Project Cost	O&M Cost	Description of Phase	
	Phase 1	\$50,000	\$12,000	2 years of pre-treatment study and recording baseline data	
	Phase 2	\$50,000	\$6,000	Actual conifer removal of meadow area	
	Phase 3	\$50,000	\$12,000	2 years of post-treatment study and recording data	
	Phase 4				
k.	Explain how operation and maintenance costs will be financed for the 20-year planning period for project implementation (not grant funded).	Post-harvest and post-study costs should be minimal. Collins Pine Company will continue to monitor and record changes to the project area via photo monitoring points at their own expense.			
l.	Has a Cost/Benefit analysis been completed?	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No			
m.	Describe what impact there may be if the project is not funded (300 words or less)	The project will probably not be implemented. It has been determined to be cost-ineffective for the past 5 years since the biomass powerplant in Westwood shut down.			

\*List all sources of funding.

Note: See Project Development Manual, Exhibit B, for assistance in completing this table

(<http://featherriver.org/documents/>).

**VIII. PROJECT STATUS AND SCHEDULE**

Please provide a status of the project, level of completion as well as a description of the activities planned for each project stage. If unknown, enter **TBD**.

Project Stage	Check the Current Project Stage	Completed?	Description of Activities in Each Project Stage	Planned/ Actual Start Date (mm/yr)	Planned/ Actual Completion Date (mm/yr)
a. Assessment and Evaluation	<input checked="" type="checkbox"/>	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> N/A	The Rock Creek area has been surveyed to determine the feasibility of placing a meadow enhancement project.	04/15	07/15
b. Final Design	<input type="checkbox"/>	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> N/A		09/15	12/15
c. Environmental Documentation (CEQA / NEPA)	<input type="checkbox"/>	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> N/A		10/15	04/16
d. Permitting	<input type="checkbox"/>	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> N/A		04/16	06/16
e. Construction Contracting	<input type="checkbox"/>	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> N/A		06/16	07/16
f. Construction Implementation	<input type="checkbox"/>	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> N/A		07/16	10/16
Provide explanation if more than one project stage is checked as current status					

**IX. PROJECT TECHNICAL FEASIBILITY**

Please provide any related documents (date, title, author, and page numbers) that describe and confirm the technical feasibility of the project. See [www.featherriver.org/catalog/index.php](http://www.featherriver.org/catalog/index.php) for documents gathered on the UFR Region.

<p><b>a. List the adopted planning documents the proposed project is consistent with or supported by</b> (e.g. General Plans, UWMPs, GWMPs, Water Master Plan, Habitat Conservation Plans, TMDLs, Basin Plans, etc.).</p>	<p>The improvement of meadow habitat is important for a variety of regulatory concerns. Meadow habitat assists in maintenance of water quality, regulated by the Clean Water Act and, in California, the Porter Cologne Act. Meadows are habitat for many endangered and threatened species, regulated by the Endangered Species Act. Timing of peak flows and water storage within watersheds fall under the jurisdiction of many state and federal agencies, including Army Corp of Engineers, California Dept. of Water Resources, and Bureau of Reclamation.</p>
<p><b>b. List technical reports and studies supporting the feasibility of this project.</b></p>	<p>There are many studies documenting the decline of meadow habitat in the Sierra Nevada and research methods that support this work. The list below is just a couple of resources, more can be provided.</p> <p>Aylward, B. and A. Merrill. 2012. An economical analysis of Sierra meadow restoration. A report for Environmental Defense Fund under the National Fish and Wildlife Foundations Sierra Meadows Initiative. Access online December 16, 2013 at:  <a href="http://www.fs.fed.us/r5/hfqlg/monitoring/resource_reports/socioeconomics/Economic%20Analysis%20of%20Meadow%20Restoration%202012.pdf">http://www.fs.fed.us/r5/hfqlg/monitoring/resource_reports/socioeconomics/Economic%20Analysis%20of%20Meadow%20Restoration%202012.pdf</a></p> <p>California Department of Fish and Game (CDFG). 2012. Aspen restoration. Accessed on internet Dec. 2012 at:  <a href="https://r1.dfg.ca.gov/portal/ConservationPermitting/Timber/Wildlife/WildlifeHabitats/AspenRestoration/tabid/924/Default.aspx">https://r1.dfg.ca.gov/portal/ConservationPermitting/Timber/Wildlife/WildlifeHabitats/AspenRestoration/tabid/924/Default.aspx</a></p> <p>Ratliff, Raymond D. 1985. Meadows in the Sierra Nevada of California: state of knowledge. Pacific Southwest Forest and Range Experiment Station, U.S. Department of Agriculture Forest Service, Berkeley, CA. Gen. Tech. Rep. PSW-84. 52 p.</p> <p>University of California at Davis (UC Davis), Natural Heritage Institute, US Forest Service, and Department of Fish and Game. 2007. Final Report Sierra Meadows: Historical Impact, Current Status and Trends, and Data Gaps. Final Report of USEPA Contract CD96911501 June 19, 2007. Accessed on internet Dec. 2012 at: <a href="http://watershed.ucdavis.edu/pdf/SierraMeadows-2007.pdf">http://watershed.ucdavis.edu/pdf/SierraMeadows-2007.pdf</a></p>
<p><b>c. Concisely describe the scientific basis</b> (e.g. how much research has been conducted) <b>of the</b></p>	<p>Meadows create a number of important hydrologic functions in watersheds. Meadows can: 1) dissipate stream energy from high flows, reducing erosion and improving water quality; 2) filter sediment and capture bedload, aiding floodplain development; 3) enhance floodwater retention and groundwater recharge; and 4) support root masses that stabilize streambanks against cutting action</p>

<p><b>proposed project in 300 words or less.</b></p>	<p>(UC Davis et al, 2007). Stable, well vegetated streams with functioning meadows, aquifers and uplands are critical to reducing erosion and modifying potentially destructive runoff patterns (UC Davis et al., 2007).</p> <p>The recognition of the importance of meadows in the ecology of the Sierra Nevada Mountains and the deterioration of meadow distribution, size, and quality has prompted restoration efforts and changes to land management policies. Restoration efforts have focused on restoring degraded stream channels by altering the grade of the watercourse and on removing encroaching forest vegetation and restoring the hydrologic processes which promote and maintain meadow habitat. There has been quantification of the hydrologic benefits of meadow restoration by grading stream channels, but little quantification on removal of conifer encroachment. The funds requested in this proposal are to characterize and measure the hydrologic response of shallow groundwater and soil water due to meadow restoration by encroaching conifer removal. Both private forest and agricultural landowners have spent considerable resources to restore meadow habitat on their lands. Providing better understanding of the hydrologic response to meadow restoration will attempt to quantify the benefits the meadow restoration and mitigation efforts have produced.</p> <p>University of California at Davis (UC Davis), Natural Heritage Institute, US Forest Service, and Department of Fish and Game. 2007. Final Report Sierra Meadows: Historical Impact, Current Status and Trends, and Data Gaps. Final Report of USEPA Contract CD96911501 June 19, 2007. Accessed on internet Dec. 2012 at: <a href="http://watershed.ucdavis.edu/pdf/SierraMeadows-2007.pdf">http://watershed.ucdavis.edu/pdf/SierraMeadows-2007.pdf</a></p>
<p><b>d. Does the project implement green technology</b> (e.g. alternate forms of energy, recycled materials, LID techniques, etc.).</p>	<p><input type="checkbox"/> Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> N/A If yes, please describe.</p>
<p><b>e. Are you an Urban Water Supplier<sup>1</sup>?</b></p>	<p><input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> N/A</p>
<p><b>f. Are you are an Agricultural Water Supplier<sup>2</sup>?</b></p>	<p><input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> N/A</p>
<p><b>g. Is the project related to groundwater?</b></p>	<p><input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A If yes, please indicate which groundwater basin.  Upper Feather River Watershed</p>
<p><sup>1</sup> Urban Water Supplier is defined as a supplier, either publicly or privately owned, providing water for municipal purposes either directly or indirectly to more than 3,000 customers or supplying more than 3,000 acre-feet of water annually. <sup>2</sup> Agricultural Water Supplier is defined as a water supplier, either publicly or privately owned, providing water to 10,000 or more irrigated acres, excluding the acreage that receives recycled water.</p>	

## Climate Change – Project Assessment Checklist

This climate change project assessment tool allows project applicants and the planning team to assess project consistency with Proposition 84 plan standards and RWMG plan assessment standards. The tool is a written checklist that asks GHG emissions and adaptation/resiliency questions.

Name of project: UF-2: Rock Creek Meadow Restoration project

Project applicant: Collins Pine Company

## GHG Emissions Assessment

### Project Construction Emissions

*(If you check any of the boxes, please see the attached worksheet)*

- The project requires nonroad or off-road engines, equipment, or vehicles to complete.
- The project requires materials to be transported to the project site.
- The project requires workers to commute to the project site.
- The project is expected to generate GHG emissions for other reasons.
- The project does not have a construction phase and/or is not expected to generate GHG emissions during the construction phase.

### Operating Emissions

*(If you check any of the boxes, please see the attached worksheet)*

- The project requires energy to operate.
- The project will generate electricity.
- The project will proactively manage forests to reduce wildfire risk.
- The project will affect wetland acreage.
- The project will include new trees.
- Project operations are expected to generate or reduce GHG emissions for other reasons.

## Adaptation & Resiliency Assessment

### Water Supply

Describe how the project makes the watershed (more/less) resilient to one or more of the following high priority water supply vulnerability issues:

- Not applicable
- Reduced snowmelt
- Unmet local water needs (drought)
- Increased invasive species

More resilient by improving available soil moisture for surrounding trees, and by enhancing recharge to groundwater aquifers.

### Water Demand

Describe how the project makes the watershed (more/less) resilient to one or more of the following high priority water demand vulnerability issues:

- Not applicable
- Increasing seasonal water use variability
- Unmet in-stream flow requirements
- Climate-sensitive crops
- Groundwater drought resiliency
- Water curtailment effectiveness

More resilient by creating more availability of groundwater to feed nearby streams and by reducing water stress for water dependent vegetation.

## Water Quality

Describe how the project makes the watershed (more/less) resilient to one or more of the following high priority water quality vulnerability issues:

- Not applicable
- Increasing catastrophic wildfires
- Eutrophication (excessive nutrient pollution in a waterbody, often followed by algae blooms and other related water quality issues)
- Seasonal low flows and limited abilities for waterbodies to assimilate pollution
- Water treatment facility operations
- Unmet beneficial uses (municipal and domestic water supply, water contact recreation, cold freshwater habitat, spawning habitat, wildlife habitat, etc.)

More resilient by reductions in catastrophic wildfires and associated reductions in severely burned soils and erosion related impairments to water quality. And more resilient through increased seasonal low flows to nearby streams and aquifers from reducing fire-prone conifer densities. Reduced forest densities in turn, reduce evapotranspiration competition and water stress levels for retained mature vegetation, including streamside vegetation, during the growing season. And more resilient by making more water available for beneficial uses through enhanced stormwater infiltration and groundwater recharge to forest soils and aquifers during the dormant season. Cold freshwater spawning habitat and wildlife habitat is enhanced by stream cooling in the summer that results from higher inputs of shallow groundwater to nearby streams and through enhanced shading and temperature moderation by well-watered streamside vegetation.

## Flooding

Describe how the project makes the watershed (more/less) resilient to one or more of the following high priority flooding vulnerability issues:

- Not applicable
- Aging critical flood protection
- Wildfires
- Critical infrastructure in a floodplain
- Insufficient flood control facilities

More resilient through less risk of “fire, flood, and mud” effects to downslope water bodies from large areas of severely burned forest stands and soils.

### Ecosystem and Habitat

Describe how the project makes the watershed (more/less) resilient to one or more of the following high priority ecosystem and habitat vulnerability issues:

- Not applicable
- Climate-sensitive fauna or flora
- Recreation and economic activity
- Quantified environmental flow requirements
- Erosion and sedimentation
- Endangered or threatened species
- Fragmented habitat

More resilient from less erosion and sedimentation caused by severe wildfires. More resilient to habitat fragmentation by wildfire that is so severe and extensive that large acreages of mature forest habitats are converted into non-forest conditions, thereby reducing habitat availability and habitat connectivity for the iconic fish and wildlife species that are dependent on connected mosaics of mature forest habitats.

### Hydropower

Describe how the project makes the watershed (more/less) resilient to one or more of the following high priority hydropower vulnerability issues:

- Not applicable
- Reduced hydropower output

May be applicable where fuels reduction projects at a landscape scale are effective in enhancing measurable summer flows in hydropower source watersheds (e.g. the North Fork Feather River that drains to Pulga, or in the watersheds draining to Lake Oroville on the Middle Fork of the Feather River below Sierra Valley.

Project Assessment - GHG Emissions Analysis**

UF-2: Rock Creek Meadow Restoration

**GHG Emissions Analysis**

**Project Construction Emissions**

The project requires non-road or off-road engines, equipment, or vehicles to complete. If yes:

Type of Equipment	Maximum Number Per Day	Total 8-Hour Days in Operation	Total MTCO <sub>2</sub> e
Excavators	2	20	17
Rubber Tired Dozers	1	20	19
Excavators	1	20	9
Other Construction Equipment	1	20	2
			0
			0
			0
			0
			0
			0
<b>Total Emissions</b>			<b>47</b>

The project requires **biomass** materials to be transported outside of the UFR watershed. If yes:

Total Number of Round Trips	Average Trip Distance (Miles)	Total MTCO <sub>2</sub> e
		<b>0</b>

The project requires workers from outside of the UFR watershed. If yes:

Average Number of Workers	Total Number of Workdays	Average Round Trip Distance Traveled (Miles)	Total MTCO <sub>2</sub> e
			<b>0</b>

The project is expected to generate GHG emissions for other reasons. If yes, explain:

The project does not have a construction phase and/or is not expected to generate GHG emissions during the construction phase.

Project Assessment - GHG Emissions Analysis**

UF-2: Rock Creek Meadow Restoration

**Project Operating Emissions**

The project requires energy to operate. If yes:

Annual Energy Needed	Unit	Total MTCO <sub>2</sub> e
	kWh (Electricity)	<b>0</b>
	Therm (Natural Gas)	<b>0</b>

The project will generate electricity. If yes:

Annual kWh Generated	Total MTCO <sub>2</sub> e
	<b>0</b>

\*A negative value indicates GHG reductions

The project will proactively manage forests to reduce wildfire risk. If yes:

Acres Protected from Wildfire	Total MTCO <sub>2</sub> e
100	<b>-630</b>

\*A negative value indicates GHG reductions

The project will affect wetland acreage. If yes:

Acres of Protected Wetlands	Total MTCO <sub>2</sub> e
100	<b>-433</b>

\*A negative value indicates GHG reductions

The project will include new trees. If yes:

Acres of Trees Planted	Total MTCO <sub>2</sub> e
	<b>0</b>

\*A negative value indicates GHG reductions

**GHG Emissions Summary**

Construction and development will generate approximately:	47 MTCO <sub>2</sub> e
In a given year, operation of the project will result in:	-1,063 MTCO <sub>2</sub> e
